2010

Mobile Content Framework on the BlackBerry

LINE

Capabilities

High bandwidth mobile networks, a new world of always-on business communications and an 'instant information' culture - all factors converging to drive a growing demand for mobile learning. LINE has been providing solutions and charting new territory in this field since 2001.

Since then the technology has progressed significantly. LINE now produces learning content for a range of mobile devices, including RIM's BlackBerry, Apple's iPhone and iPad, Microsoft Mobile and Google Android.

Application development is a strong part of our mobile strategy at LINE, but we can also offer our Mobile Content Framework (MCF) which can deliver M-Learning content to all major platforms in reduced time and low cost.

Adaptive Cruise Control for Ford on the iPod Touch

2010

Fire Control Orders for Ministry of Defence on the iPad

21st century learning using mobile devices

Mobile Content Framework (MCF)

Ensuring that you make the most of the latest technology today must be balanced with access for all. LINE has developed mobile solutions and online frameworks for a range of mobile devices (smartphones to tablets) that can be delivered either through your secure intranet or over the internet. Our approach is both efficient and flexible allowing for future maintenance and translation.

2010

Vehicle Maintenance Support

LINE created a vehicle maintenance support system on the iPod Touch for the MOD. The programme provides 'point of need' information for the service engineers of armoured support vehicles. The system involves both diagnostic tools as well as regular maintenance checklists. Furthermore, the checks and actions for all vehicle maintenance programmes can be relayed to the central system for general monitoring.

2010

Cultural Awareness

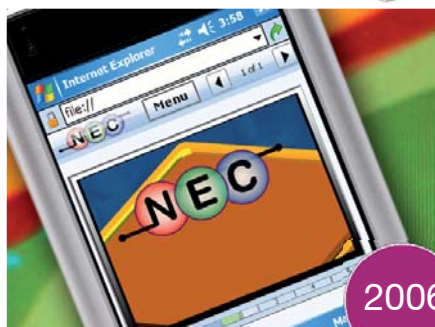

The MOD needed to develop an effective programme to minimise culturally-related misunderstandings in Iraq and Afghanistan – that could be done before personnel arrived 'in theatre'. LINE identified authentic scenarios that troops could face, key cultural factors that could influence them and ways in which service personnel could react. The award-winning course has been converted to the iPhone so that troops can now access its content anywhere, at any time.

2009

Network Enabled Capability

LINE and DA-CMT (formerly dblearning) created an awareness course in 2006, centring on Network Enabled Capability for the MOD. The programme was aimed at everyone within the Defence community, including military personnel, civil servants and service providers. LINE designed the entire e-learning course for Windows Mobile 5 and desktop delivery at the same time.

2006

Mobile Learning Research Project

Created in 2001, this was one of LINE's first projects for mobile devices. We produced two collaborative projects with Palm in Santa Clara, USA, exploring the learning potential of mobile systems. LINE delivered two sophisticated mobile e-learning applications for the Palm PDA that included the principles of health and safety, complete with video, that tracked scores to a central system.

2001

Our areas of work

- Compliance
- Task Aids
- Nuggets
- Survey

Mobile Methodology and Approach

- Single source publishing
- XML-driven
- Future proof
- Rapid prototyping
- Online reviewable

Technical Solutions

- Single delivery solution
- Video, Audio, Quiz capable
- Progressive Enhancement
- Scalable to fit various tools/needs
- Online HTML or Dedicated App

Delivered on

- iPhone/iPod Touch
- Android
- Symbian
- Blackberry
- iPad
- UMPC
